

Tomando como base el repositorio

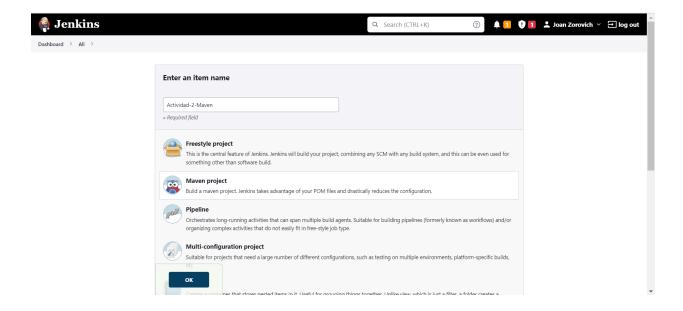

https://github.com/jitpack/maven-simple

Van a utilizar Jenkins y Maven para crear un job en el cual se va a generar la build. (solo generarla más no ejecutarla), usando el comando clean package.crear un documento PDF donde van a adjuntar los pantallazos en los cuales de forma clara se aprecie los pasos realizados para crear el jobs y el log del resultado final (console output).

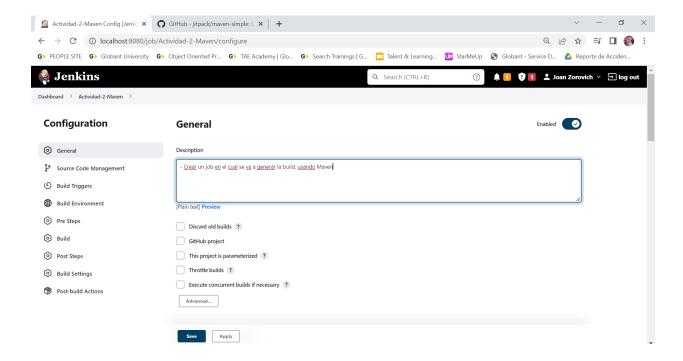

1. Crear el Job → dar click en New Item

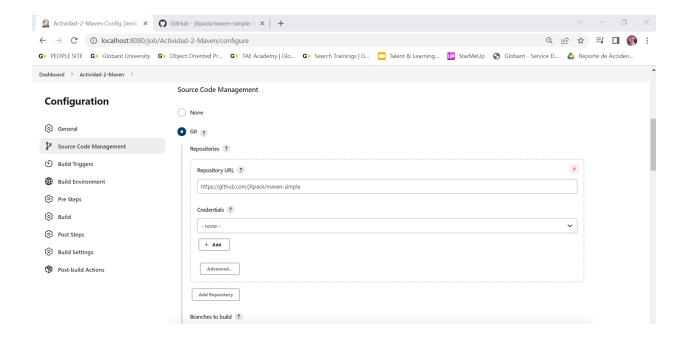

- 2. Darle un nombre al Job
- Seleccionar Maven Project
- Click en ok

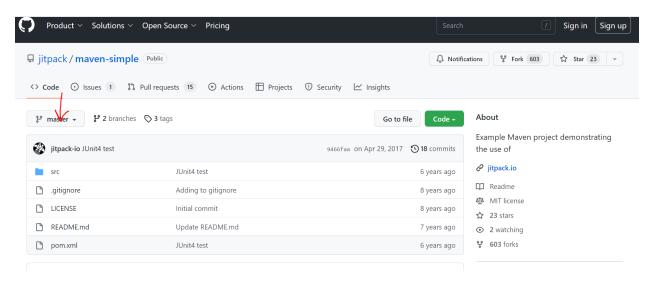

3. Añadir una descripción al Job → para el caso academico, se indica el objetivo de la actividad.

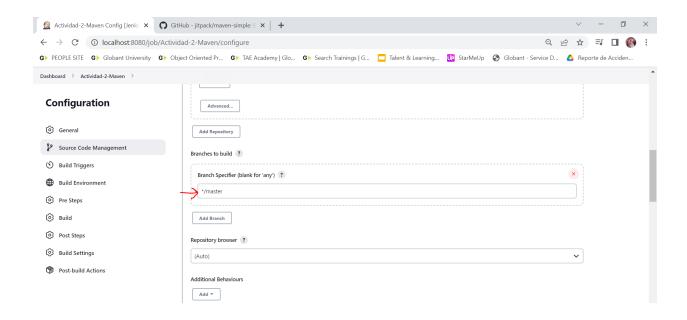

- 4. Como se va a trabajar con un repositorio de Github;
 - Seleccionar GIT
 - Colocar la URL del repositorio

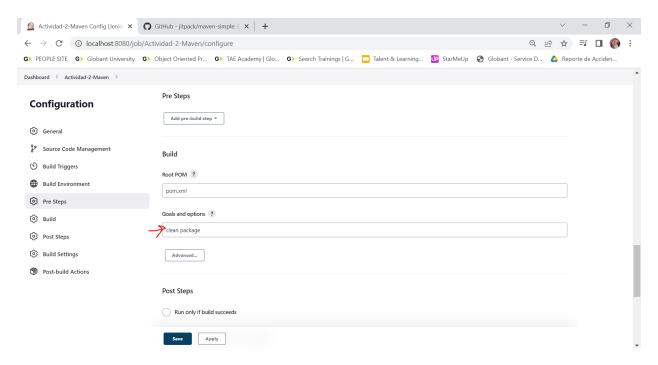

5. Indicar la rama donde queremos que se ejecute el proceso, en este caso master

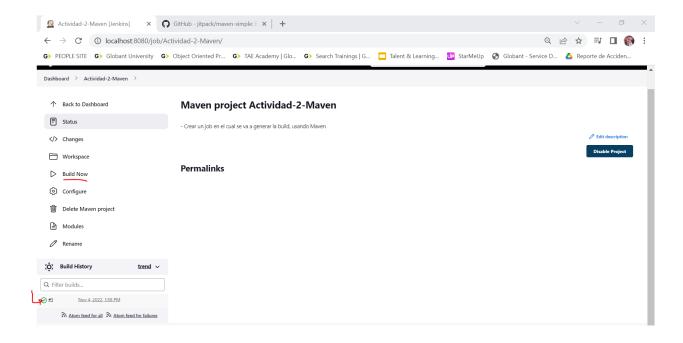

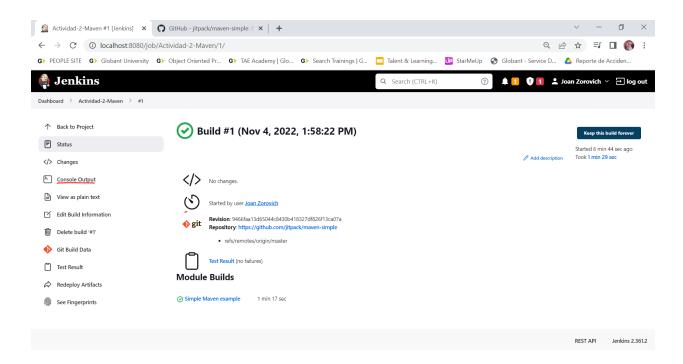

6. Vamos a ejecutar las pruebas unitarias (Goals and options)

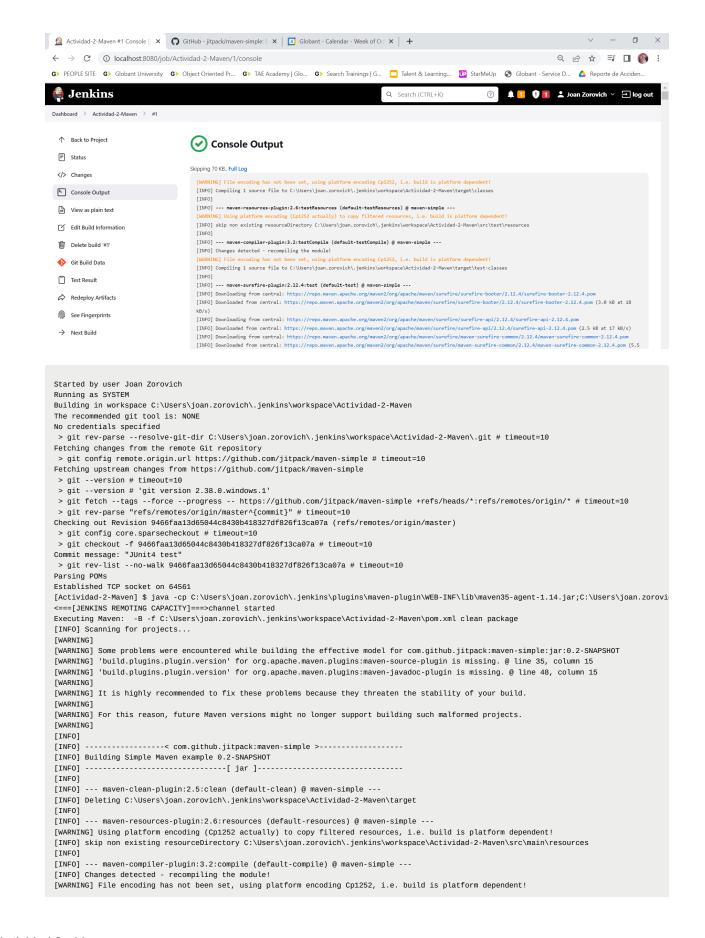

- Apply \rightarrow save
- 7. Ejecutar el Job → Build Now
- 7. Validar si la ejecución fue correcta dar click en el #1, en este caso

9. Consultar los logs - Click Console Output

- · Se crearon los archivos
 - \circ .jar \rightarrow tiene todo el código compilado
 - ∘ sources.jar → solo contiene el código fuente, es decir todos los archivos java que se utilizaron para crear la build
 - ∘ javadoc.jar → generador de documentación en formato HTML
